Overview

DISA's Application Security and Development STIG, in conjunction with the associated checklist, provides a comprehensive listing of requirements and needs for improving and maintaining the security of software applications and systems within the Department of Defense. This course fills in the context, background, and best practices for fulfilling those requirements and needs. As with all of our courses, we maintain tight synchronization between the latest DISA releases and our materials. A key component to our coverage of DISA's Security Technical Implementation Guides (STIGS), this course is a companion course with several developer-oriented courses and seminars. Application Security and Development (STIG) is a lab-intensive, hands-on application security training course essential for developers, designers, architects, QA, Testing, and other personnel who need to deliver secure applications within the DOD. In addition to teaching basic programming skills, this course digs deep into sound processes and practices that apply to the entire software development lifecycle.
